

Stainback Public/Private Real Estate

AGENDA #7a

April 6, 2004

To: Mayor and Town Council

From: John Stainback, Stainback Public/Private Real Estate (SPPRE)

Re: Summary of Market Study, Preliminary Building Program and the Next Step in the Development of Town-Owned Lots 2 and 5

Summary of Market Demand Study

Overview

Based on the results of an objective third-party (ERA), SPPRE recommends that the Town of Chapel Hill proceed to Part 1B: Development of Master Plans. Now that the Town has completed a study, which confirms the demand for a variety of uses, the Council should be confident to proceed to the next step. This confirmation of demand for space by a nationally recognized market demand consultant will also provide the private development community with a strong basis to respond to a Request for Qualifications (RFQ) and/or a Request for Proposal (RFP).

ERA's comprehensive report presents the basis for a mix of uses and a building program for Town-Owned Lots 2 and 5. In fact, assuming a scale of development, complementary to the scale of the Downtown, Lots 2 and 5 cannot accommodate the full market demand for housing and retail uses described in the ERA report.

The results of the market study include:

- A total of up to 386 housing units over five years with a mix of market-rate rental and owner-occupied units
- A demand for the mandated set aside for affordable housing
- Retail space totaling 112,000 square feet downtown, and up to 666,000 SF, in the Chapel Hill area generally.
- Up to three new cinema screens

- A small scale specialty grocery store
- Art gallery space

The demand for office space does not warrant including that use in the building program.

The Council Committee's Reaction to Recent Presentations

My understanding of the Council Committee's reaction to the demand for the mix of uses is to consider proceeding with three types of housing: market-rate rental units, owneroccupied units and affordable housing, retail space, which includes a specialty grocery store, art gallery space, all of which is highly inter-related with active pedestrian space(s) and, if physically possible, some form of a Transit Transfer Center.

It was also clear how important design is to the ultimate development of the Town-Owned sites. I want to reiterate that I have confidence in HKS Architects to complete the first-round of master plan concept. Equally important, the Council should realize, we are dealing from a position of strength and can demand quality design from candidate developers. When preparing the RFQ and/or RFP the Council can place great emphasis on design. In addition, I recommend structuring the public/private partnership with the competitively selected developer to include a variety of Approval Rights on issues such as: selection of the architect, approval of Schematic Design (SD), Design Development (DD) and Outline Building Specifications.

In addition, design reviews, public forums and the ability to stop the project are included in Part 1B of the SPPRE Scope of Work.

It was also clear the Council Committee wants every effort to be made to include some form of a Transit Transfer Center in the conceptual design of Parking Lots 2 and 5. These two sites are relatively small and in order to develop a true mixed-use project and achieve the envisioned successful pedestrian spaces, we may not be able to accommodate a traditional transit center on either site. I suggest we include a reduced version of the Transit Center or accommodate stations on street space, and wait to see the initial design work produced by HKS, before we make the final decision on this development component.

Results of the Public Forum

Town residents shared their concern of developing Lots 2 and 5 without replacing the existing parking spaces, consequently, the proposed building program now includes the 274 parking spaces currently available.

Town residents reinforced the Council's desire to incorporate some form of a Transit Transfer Center into the redevelopment of Downtown.

At least one resident wanted the planner to explore how to make the Downtown into a regional destination. This will be included in the informal design guidelines provided to HKS Architects.

Another resident wanted the consultant team to explore the concept of providing activity space for teenagers ranging in age from 11 to 17. The concept was to provide this age group something to do while their parents attended art galleries. This concept will also be provided to the HKS design team.

Other points raised included: 1) Expand the Town Tax base; 2) Include public space and possibly a coffee bar into the Transit Transfer Center; 3) Explore including a bookstore as part of the proposed retail space; 4) suggested that we do not duplicate "Weaver Street"; 5) Suggested we focus on the existing movie theatres and not a new three-screen Cineplex; and 6) Test the feasibility of providing discounted parking rates to people attending future theatrical performances.

One resident suggested that we meet with UNC officials to discuss the concept of using UNC-owned parking lots after 5:00 PM. This shared parking concept could reduce the need for new parking resulting from the redevelopment of Lots 2 and 5.

The Recommended Preliminary Building Program

I thought it would be much more effective if I took the initiative to prepare a **site-specific** building program rather than reiterate a summary of the market report. So I developed the attached preliminary building program spreadsheet. Please note that the recommended building area for each use was based SOLELY on the allowable maximum Floor Area Ratio (FAR) and available bonuses for residential development, and does NOT address building height or any design considerations. The results of the market study provide the Town with great flexibility. That flexibility will be repeatedly stressed with HKS. The Preliminary Building Program does NOT exclude any mix of uses, nor does it limit, or dictate the building area allocated to each use. I suspect building height, the design of cost effective and efficient parking garages and building design will reduce the scope of the final building program.

After discussing with Town staff, I did complete a quick analysis of existing and new parking requirements. The two development sites currently include 274 parking spaces. The proposed development of the two sites requires 407 parking spaces for a total count of 681 spaces. As described in the spreadsheet, the configuration and area of Lots 2 and 5 can accommodate efficient garage layouts. Using industry standards, the replacement and new parking on Lot 2 can be accommodated in a 2.5 to 3 level above-grade garage. The replacement and new parking required for the development of Lot 5 can be accommodated in a two-level above-grade garage. Clearly, HKS will also explore underground garages, but I want to stress that the cost of underground garages (\$18,000

to \$25,000 per space) are approximately twice as expensive as above-grade garages (range of \$10,000 to \$13,000 per space). The cost of an above-grade garage accommodating the replacement parking alone will be in the range of \$2.75 million to \$3.5 million.

If after our financial analysis, the Town is required to finance the replacement parking spaces, we can use the proceeds from the Land Lease, but all, or some portion of the annual land lease payments to the Town will be allocated to cover the debt service on the public portion of the two garages. I have confidence that we can develop a creative finance plan for the garages, but the garages will definitely affect the scale of the proposed developments, and in fact, may require the Council to consider increasing the allowable building height and/or scaling back the proposed development programs.

Next Steps

The results of the ERA Market Report will be referred to throughout the balance of the pre-development process. It is one of the most important steps of the pre-development process recommended by SPPRE. The Council now has a solid basis to proceed to the development of the Master Plan phase of the process, should it elect to do so. There are seven (7) Tasks included in Part 1B of the SPPRE Scope of Work. These Tasks include:

- Task 1.8: Prepare Building Program (now already started at risk by SPPRE)
- Task 1.9: Prepare Contract for HKS Architects
- Task 1.10: Complete a Design Review with Council Committee (HKS incorporates comments by Committee)
- Task 1.11: Select a Local Construction Company to Provide Cost Estimates of the Proposed Development of Lots 2 and 5
- Task 1.12: Conduct Public Forum and Second Design Review with Council Committee.
- Task 1.13: Present Design to Town Council.

HKS incorporates comments before preparing final design and three (3) illustrative perspective sketches

The Council has substantial flexibility and control of the pre-development process. I look forward to working with the Town Council, Council Committee and Town staff to design and develop projects which meet the Council's objectives.
