To: Mayor and Town Council

From: Loren Hintz, Chair

Chapel Hill Transportation Board

Date: September 20, 2000

Subject: Development Ordinance Revision Project

The Transportation Board prepared the following recommendations by consensus for consideration by the Town Council.

The Board believes the that the Town's consultant should review and revise the following elements of the Town's Development Ordinance:

- Street standards: Street standards should be revised to reduce the width of local streets.
- Traffic Impact Analysis: The guidelines for preparing traffic impact analysis should be revised to provide better information to the Council, advisory boards and the public. Transit, bicycle and pedestrian factors should be included in the analysis.
- Transportation Management Plans: Improvements are needed to the Town's ongoing administration of the transportation management program.
- Bicycle and Pedestrian Facilities: The development ordinance should require expanded bicycle and pedestrian facilities, particularly bikelanes along major transportation corridors. Benches and other pedestrian amenities should also be provided. When sidewalks for new development cannot be connected to adjacent sidewalks connections to the street should be provided. Wider planter strips and requirements for street trees should also be included in the Ordinance.
- Parking Standards: The Town should adopt revised parking standards that set maximum parking rates for residential, commercial and office uses.
- Pedestrian and Bicycle Level of Service: The analysis of the transportation impacts of development should include the assessment of pedestrian and bicycle level of service.
- Bus Stops-The Development Ordinance should include requirements for provision of bus stops and amenities.
- Mixed Use- The Development Ordinance should encourage mixed use development that promotes alternative transportation.
- Neighborhood Recreation Areas: The Ordinance should promote smaller, neighborhood recreation areas.
- Visualization: The Ordinance should require more innovative visual material to assist the Council, advisory boards and the public in reviewing proposed projects.
- Adequate Public Facilities-The Ordinance should provide a mechanism for the-Town to assess new development a fee that could be used for transportation improvements in the surrounding area.
- Street Connectivity: The Ordinance should promote the connection of local streets. It should also provide for non motorized pedestrian and bicycle connections between streets that do not have a physical connection.
- Street Lighting: Greater street lighting should be required using technologies that minimize unnecessary light pollution.

@ Synthesis 6/19/01

TRANSPORTATION BOARD COMMENTS DRAFT CHAPEL HILL DEVELOPMENT ORDINANCE

F6 .:		
Section	Page	Comment
2-2 Conventional	2-4	Street standards Table 2.2.1 missing. These standards
Subdivison, (k)		should limit street width and require sidewalks. No
·		mention of Street Connectivity Index, which should apply
		for internal streets. Why are some Urban Design
	<u> </u>	principles not applicable in this section?
2-3 Conservation	2-9	Street standards Table missing. These standards should
Subdivision (k)		limit street width and provide sidewalks. Street
		Connectivity Index concept needs more description.
2.4 Traditional	2-13	Table 2.4.1 should be completed. Table numbering is
Neighborhood	Ì	confusing.
Development (d)	ļ	
(e)	2-14	Some provisions of Adequate Public Facilities
		requirements should apply to TND.
(h)	2-15	How do these guidelines compare to the Southern Village
		or Meadowmont designs? Setbacks should be limited in
		TND areas.
(j)	2-16	Parking standards allow to high a maximum. TND
	Ī	regulations should set a maximum standard that is lower
		than that proposed. On street parking should be allowed to
		satisfy parking requirements for multifamily projects.
Street Types	2-17,	These standards seem excessive and repeat some of the
	18	mistakes of the streets in the Southern Village. Sources
		other than NCDOT should be consulted to determine the
		best standards. Curb radius should also be included in
		street standards.
Urban Design	2-	Transit design considerations should be included.
	18,19	Discussion of appropriateness of alleys should also be
		included.
2.5 Development in	2.21	Parking maximums too high and relieving this
Older Areas (f)		development of the minimum requirements should
Parking		consider the possible spillover of parking into adjoining
		areas.
2.6 Vertical Mixed	2-26	Formula to determine minimum parking is confusing. It is
Uses (j) Parking		difficult to recommend use of this formula without
		examples of how it would be applied.
2.7 Commercial	2-29	Provisions of Adequate Public Facilities should be

ı	2	u	,

4.7.2 Master Land Use Plan	4-30	Criteria for developing Master Land Use Plans should include promotion of transit oriented development and
	<u> </u>	pedestrian activity.
(j) Minor Changes (3), (4)	4-33	Standards should be developed to define "substantial changes"
5.2 Adequate Public	5-1	Capacity of Public Transit System should be included as a
Facilities		component of the Adequate Public Facilities system.
		Methodology section should be amended to incorporate transit system capacity.
5.2.2.2 Rezonings	5-2	Definition of "public facilities" should include transit, pedestrian and bicycle capacity as well as roadway.
5.2.3 Methodology and Criteria	5-3	Consider expanding impact area to one mile from ½ mile.
5.2.3.3	5-4	NC 86 should be included as a corridor that includes pass
Determination of		through traffic.
Adequacy of Public		
Streets (c)	1	
(d) 5.2.8.5	5-5	What is the justification for the 30% reduction?
Requirements for	5-12	Include transit system capacity and pedestrian capacity.
CIP Implementation		
(1) Availability of		
Capacity by Impact		
Area	1	
5.9.5 Parking Design	5-26	Allow on street parking to count town
Standards	3-20	Allow on street parking to count towards required parking for multi family in TND and Transit Oriented districts
5.9.6	5-29	Maximums for parking set too bish Minimums for parking set too bish Minimum set too bi
Minimum/Maximum		Maximums for parking set too high. Minimums very similar to existing standards, maximums should be set at
Parking Standards		110% of minimum, consistent with current Council
	ļ	policy.
5.12 Access and	5-41	Language should be added to require maintenance of
Circulation		bicycle and pedestrian facilities during construction.
5.12 Access and Circulation	5-42	A connectivity index should be created for sidewalks and bicycle facilities
5.12 Access and	5-42	Connectivity Index should be explained in greater detail.
Circulation (b) (1)		chouse of exhibiting itt Riestel detail.
5.12 Access and	5-43	Does reference to "dead end" streets include cul de sacs?
Circulation		Use of cul de sacs should be limited.
5.13.4 Permitted	5-46	Erosion control section should address prohibiting runoff
Activities and		onto pedestrian/bicycle facilities.
Standards 6-9 Park Ride		
Terminals	6-3	Remove requirement for park ride to have direct access to
- emmais		arterial or collector. Mixed use developments should
6.17 Planned	6-5	integrate park nde facilities with adjacent development.
Development	0-3	Requirement that projects cannot "create traffic in
		residential neighborhoods outside the development" is
6.17.1.1 Relation to	1	unrealistic and would eliminate connection between
Major		existing and proposed development. This seems to
Transportation	1	conflict with Projecting Streets section on page 5-43.
Facilities	<u> </u>	
Appendix Equivalent	A-10	Average Employees per 1,000 square feet for office uses
Residential Unit	<u> </u>	1 is too low. 3-4 employees is more realistic
General Comments		Sections on Landscaping Plans should be revised to
		require more protection of existing trees. In addition to
		specurion trees, smaller trees should be tagged and
	1	protected during construction. Require additional
1]	vegetation to be planted along sidewalks and at hus
		shelters.

- 5. Insert an explicit statement in the proposed new development ordinance for Chapel Hill, the proposed UNC development plan and in the general rules for Chapel Hill the following: If any construction, moving, unloading, repair activity is done in Chapel Hill which blocks part of the right of way for pedestrians, vehicular or nonvehicular traffic; then a safe pedestrian and nonvehicular path (ADA compliant) must exist on the same or the opposite side of the street. This path must exist before construction, moving, unloading, repair may begin. Emergency vehicles and activities are excluded from this requirement. Upon completion of the activity existing pedestrian and nonvehicular path (including crosswalk striping) must be returned to the original or better status within 24 hours or the owner, contractor, agency will be subject to a \$100 to \$1000 dollar fine per day in violation.
- 6. Insert an explicit statement in the proposed new development ordinance for Chapel Hill and in the general rules for Chapel Hill the following: One goal of all development projects (be they a single home or business, infill or a major project) in Chapel Hill shall be to improve nonmotorized travel. Thus projects should include sidewalks so they connect to nearby sidewalks, bikelanes or streets. Also insert an explicit statement saying sidewalks should not be blocked by shrubbery, trash pickup, temporary signs etc.

```
    eliminate the rule on skate board 6.8 : too restrictive, discourages a

safe activity for teens
2.TREES 5.13 & 5.5
a. require that planted trees be maintained, especially need to water them
and not to mow/ weed whip the bark BE EXPLICIT
b. require trees to be planted near bus stops and next to sidewalks
c. use botanical definition of tree not 161 one in crainance (A-28)
d. reduce the current diameter of specimen trees from 24! to 18!.
e. 5.13.6 rare and specimen trees Has anyone from the University
commented on this list of trees? Sequoia Redwood!
f.5.13.2.2 need to apply tree rule to smaller lots if tree is near
sidewalk, right of way or bus stop
3. rewrite resource conservation district 3.6.3
a. rule applies to intermittent and perennial stream (A-19 weird using
perennial definition with old definition of intermittent. ) Why no
reference to wetland?
b. 75 or 100ft rule applies to distance from edge ( not center) of stream
Great!
c. in the case where the stream cz bows or meanders, 75 or 100ft rule
applies to both old and new stream bed, which ever protects more riparian
environment or develop topology rule
d. no new construction in the 500pt flood plain; because of dramatic
landscape changes old 100yr rules are not very protective.
e. developers and current owners are required to include in lease
agreement and post a sign on building saying area is subject to flooding
4. erosion/ runoff control 5.11 3 landscaping 5.5
a. erosion control measures must be in place before construction begins
b. if more than 1/2 inch silt/sediment is found on the other side of
erosion control feace etc. then the measures must be improved.
c. in developing a wooded area besides saving specimen trees need to flag
and save small (less than 4inch) trees. More likely to be native, already
have a head start with landscaping
```

5. Site maps must include current paths, wooden structures (bridges, benches), seeps and springs
